# Solar Lantern

Double 2.5W powerful modules for faster charging of batteries

Built-in 4.5Ah battery for longer running hours with 10 USB charging connectors

Now with brighter LED, powered by 9 High-Flux LED

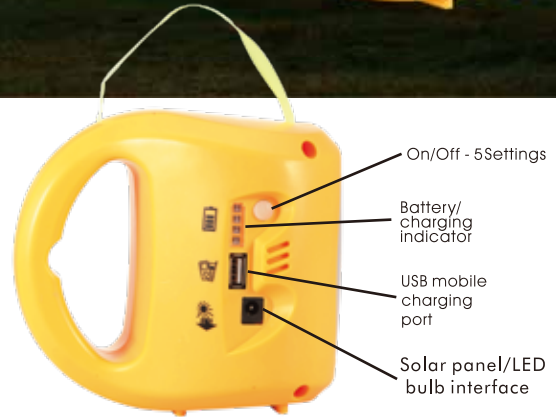

The design concept of this newest style lantern by **Maxima** is to provide highest degree of brightness, added energy-efficiency and clear user-friendliness - all in one rugged long lasting ABS+PC shell. Its compact ABS+PC plastic design is good for dust resistance and heat dissipation. The handle and strap design greatly adds to the mobility of the users. Variable inclination design comes in handy when a stationary source of light is desired from difficult angles.

All new double capacity detachable module assembly now offer twice the original charging capacity, charges batteries in half the time, same higher level of flexibility in placement of the modules. The upgrade modules can be placed to gather highest level of sunlight while the lantern is stored in cool and dry indoor location.

18 - 20 times brighter than a kerosene lantern, **Maxima** lantern is a right selection for reliable solar light source for your portable light needs.

For multi-function application, a USB output and an addition LED offer a wide range of charging possibilities, from charging mobile phones and portable MP3 players to PDAs and hand held gaming devices. NOW, you need not look else where for your all-in solar charging and lighting device.

<b>LED Bulb: 1W</b>	<b>Battery type: Lead-aid battery</b>
<b>Lumens output of LED: 180-200lm</b>	<b>Life of LED: 50,000 hrs</b>
<b>Life of battery: Design 3-5 years</b>	<b>Type of body material: ABS+PC</b>
<b>Solar power: Efficient poly-crystalline cells module</b>
