Presenter

Product Overview

Advanced Cable Positioning

Optimizing power transmission through high-strength engineering and versatile mounting. The universal solar cable clip is a versatile solution engineered to position power transmission cables on solar arrays. Made of high-strength stainless steel, it features a low-profile design that ensures a multi-functional and reliable installation across various orientations without the need for tools.

Core Features

Premium Material & Construction

Durable design built to withstand harsh environmental conditions.

01

Manufactured with **corrosion resistant 304 stainless steel** or spring grade stainless steel for maximum longevity.

02

Features **dual or four wire compartments** to accommodate various cabling needs on a single array.

03

Includes **coined edges** specifically designed to prevent damage to delicate cable insulation during use.

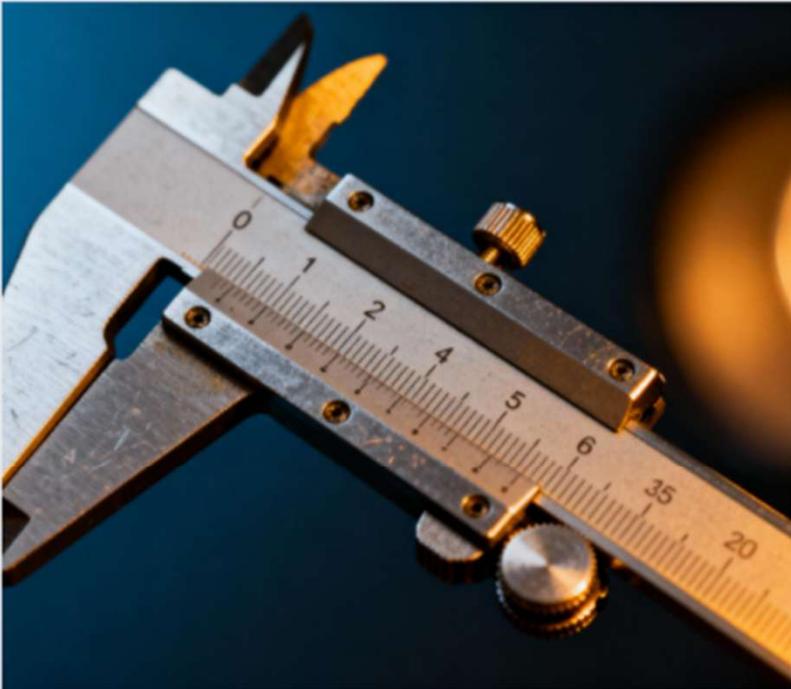

04

Provides a **wide variety of mounting configurations** for PV, AC module, and micro inverter cables.

Specifications

Technical Compatibility

Broad compatibility across diverse cable sizes and frame thicknesses.

Cable Diameter Range

Accommodates up to two cables with outside diameters ranging from 5mm to 7mm.

5 - 7

Frame Thickness

Engineered to fit standard solar panel frames between 1.5mm and 2mm thick.

1.5 - 2

Mounting Orientations

Attaches to the solar panel frame in up to four different orientations for maximum flexibility.

4

Comprehensive Protection Framework

Safeguarding both the cable integrity and the solar panel hardware.

Insulation Safety

Flared edges surround the cable area to eliminate sharp contact points and prevent insulation wear.

Shape Retention

The spring-grade steel retains its shape during installation to prevent loose cables and allow re-positioning.

Anodizing Protection

Specially engineered gripping tabs will not damage the anodizing on aluminum channels during

Efficient Tool-Free Installation

Reducing labor costs with a simplified, tool-less mounting process.

Orientation Selection

Choose from four possible orientations based on the specific layout of your solar array cabling.

Manual Attachment

Snap the clip onto each side of the solar panel frame.
No specialized tools are required.

AUTO

Secure & Adjust

Utilize the special tab for easy re-positioning or removal without damaging the frame or clip.
